

# AXON SWITCH - UNITY TACTICAL AXON SWITCH FOR SUREFIRE/DBAL LASER SYNC 7" BLACK

[Shooting Accessories](#) > [Flashlights & Accessories](#) > [Flashlight Accessories](#)

The pinnacle of remote switch design for weapon-mounted accessories, AXON™ provides complete control of lights and lasers in a single, compact and rugged housing. AXON™ is the direct result of operational feedback from professional end-users on our industry leading switch technology. Lights and lasers can be fired from individual buttons with versions available for popular issued devices. Standard AXON™ models feature each button firing devices independently. SYNC models fire the laser independently, while the light button will fire both light and laser simultaneously. NGAL variants operate in a SYNC capacity, but offer a visible override feature for light and laser. Standard configuration is 7" cable length. AXON™ mounts directly to M1913 Rail or M-LOK® (with optional M-LOK® Mounting Kit). Its unique design provides tactile differentiation between the two buttons to eliminate confusion in dark, cold and high-stress situations. The light (angled) button features a switch that allows for both momentary and constant activation, while the laser button features a momentary-only button that supports the laser's double-click-for-constant feature. SPECS MATERIAL - IMPACT RESISTANT POLYMER  
COMPATIBILITY - SUREFIRE®, NATO CRANE-SPEC PORT, NGAL (LA-23/PEQ)
